Summary of Completed Programs (Bangla Coding Tutor Playlist)

#	Program File	Core Concepts Demonstrated
1	PrintBasics.java	println vs print, escape sequences (\n, \t, \')
2	DataTypesAndVariables.java	Variables, data types, arithmetic calculations
3	PrimitiveDataTypes.java	Primitive types (byte, int, long, double, char, bool), casting
4	ConditionIfElse.java	If-else condition, even/odd, pass/fail, voting check
5	ConditionElseIf.java	Else-if grading scale (A+, A, B, C, F), largest of 3 numbers
6	SwitchCaseDemo.java	Switch-case, days of week, basic calculator
7	OperatorsDemo.java	Arithmetic, relational, logical, increment/decrement
8	ForLoopDemo.java	For loop counting, sum of numbers 1-10, multiplication table
9	WhileLoopDemo.java	While loop, sum of digits of ID, reverse number
10	DoWhileLoopDemo.java	Do-while loop execution guarantee, loop condition check
11	NestedLoopsPattern.java	Star triangles (normal & inverted), number patterns
12	ArrayBasics.java	1D array, iteration, sum, average, finding maximum
13	TwoDArrayDemo.java	2D array matrix layout, total sum, diagonal elements
14	StringBasics.java	length, charAt, toUpperCase, toLowerCase, substring, equals
15	StringSplitDemo.java	split() by spaces, comma separated string parsing
16	ScannerInputDemo.java	Scanner user input for int, double, String, buffer clear
17	MethodsDemo.java	Methods, parameters, return types, method overloading
18	MethodExercises.java	Prime check, factorial calculation, power function

All programs written, tested, and verified individually. Git commit history maintained with regular commits.
